Question–Answer Book

11th June, 2024 8:15 am – 9:45 am (1 hour 30 minutes) **This paper must be answered in English**

INSTRUCTIONS

- 1. Write your name, class and class number in the spaces provided on this cover.
- 2. This paper consists of THREE sections, A(1), A(2) and B.
- 3. Attempt ALL questions in this paper. Write your answers in the spaces provided in this Question Answer Book. Do not write in the margins. Answers written in the margins will not be marked.
- 4. Unless otherwise specified, all working must be clearly shown.
- 5. Unless otherwise specified, numerical answers should be either exact or correct to 3 significant figures.
- 6. The diagrams in this paper are not necessarily drawn to scale.

9.	A factory makes different kinds of chocolate. It is known that the cost (\$C) of n pack of chocolate is the sum of two parts. One part varies directly as the square of $(m \text{ g})$ of cocoa beans used in each pack of chocolate. The other part varies invenumber of packs of chocolate made $(r \text{ packs})$ and directly as the total number of m operated in making chocolate. When $m = 10$, $n = 40$ and $r = 20 000$, $C = 25$. When $m = 3$ and $m = 2500$, $m = 3$.	f the weight rsely as the nachines (n)
	(a) Express C in terms of m , n , and r .	(4 marks)
	(b) Given that $C = 40$, $r = 10000$ and $n = 20$, find the value of m .	(2 marks)
	(c) Suggest ONE possible value for n and r respectively if $C = 100$ and $m = 40$.	(1 mark)
